

OdorCure

ODOUR CONTROL SPECIALISTS

COMPANY PROFILE
OdorCure (Pty) Ltd

COMPANY PROFILE

OdorCure (Pty) Ltd is involved in a broad spectrum of activities in the commercial, industrial, mining, agriculture and aquaculture industries in South Africa with our focus being in the fields of Odour Control, Grease and Fat Trap Services and Water & Wastewater products and services.

OdorCure represents powerful brands such as Biorem, HLS Ecolo and Super F, OdorCure also has a Water & Wastewater division specialising in Leachate treatment, Bioremediation of contaminated water sources and the design and installation of forced evaporation systems.

OdorCure (Pty) Ltd is a privately owned South African company with its headquarters in Pretoria. OdorCure has been active in the Southern African market since 1996 and have also undertaken various large projects outside of the borders of South Africa.

Below is a brief overview:

- Founded in 1996, the company today supplies and services a wide range of odour control products as well as offering **Grease and Fat Trap maintenance services** to an array of clients.
- Pioneering efforts in recent years led to the development of **Forced Evaporation systems** used by many industrial clients such as Sasol Synfuels, Natref, Enviroserv and Samancor.
- OdorCure (Pty) Ltd has branches in Gauteng and the Eastern Cape and is further represented through affiliations with other companies such as Vitacure, Odour Control Solutions and Biocure in the Western Cape as well as Odour Engineering Systems in Kwazulu Natal.
- Long standing customers include commercial clients such as Monte Casino, Emperor's Palace, Silverstar Casino, Eastgate Shopping Centre, Sandton Shopping Centre to name a few. OdorCure also service industrial clients such as Sasol Synfuels, Natref, Ekurhuleni Metropolitan Municipality, Tshwane Metropolitan Municipality, Johannesburg Water, Eskort, Envirofill, Enviroserv, Airports Company South Africa, Standard Bank, First National Bank, Nedbank, Eskom, SAB, BHP Billiton and many others.

ODORCURE (PTY) LTD - ODOUR CONTROL DIVISION

OdorCure products are unique in that they are not masking agents or deodorizers but rather odour neutralizers!

OdorCure specialises in effective odour elimination!

Brands incorporated in our Odour Control division are:

The HLS Ecolo Product Range

Since 1973, Ecolo Odor Control Technologies Inc. has been developing and manufacturing quality odour control solutions for solid waste, wastewater, industrial and commercial facilities.

Through years of innovation and industry experience, Ecolo has developed and manufactured a comprehensive line of industry specific misting systems to provide years of trouble free operation. Manufactured at its facilities in Toronto, Ontario and Houston, Texas, Ecolo's pneumatic, vapor and hydraulic misting systems come with leading edge design, programmability, and customer support.

Our respect for the environment and our attention to natural processes shapes the solutions we provide to core issues in odour control markets.

Ecolo AirSolutions is designed to eliminate both airborne and surface odours. Normal masking agents only add scent to the smell generated by industrially formed odour compounds. AirSolution is different than simple masking agents; our misting odour neutralizers attract and neutralize odors through reactive chemical processes for permanent destruction. AirSolution is safe to use and environmentally friendly.

These highly concentrated and widely versatile formulations are water-soluble and can be used in both indoor and outdoor environments, dispersed through our rugged AirStreme automated misting systems.

The Biorem Product Range

Biorem is a pioneer environmental biotechnology company that designs, manufactures and distributes a comprehensive line of high-efficiency air emissions control systems used to eliminate odours, volatile organic compounds (VOCs), and hazardous air pollutants (HAPs).

We offer a selection of products that can be tailored to suit application specific requirements. Biorem ensures optimised long-term performance on every application by custom-designing the solution to meet the individual needs of our clients.

With sales and manufacturing offices across the continents, dedicated research facilities, analytical and microbial laboratories, worldwide sales representative network, and a dedicated service division, Biorem has the resources available to ensure that your project is handled promptly and professionally from conception to completion.

With the largest installation base of its kind in the world, continued extensive research efforts, and over 21 years of experience, Biorem not only offers state of the art technology-based products – but also peace of mind for municipalities, industrial companies and their surrounding communities.

The Super-F Product Range

Super-F Inc. is established in Quebec, in l'Assomption, Canada. They are specialists in manufacturing products for neutralizing odors and gases. Their new technology was discovered by Mr. Paul Arsenault in 1996, the result of many years of research. Super-F Technology is made of complex compounds of natural extracts and synthesis products. Injecting the products in the course of processes, in waste water, sludge, wastes or others, we can completely neutralize from any source, not only the odours but also gases such as ammonia, mercaptans, H₂S (hydrogen sulfide) and other gases.

OdorCure

ODOUR CONTROL SPECIALISTS

ODORCURE (PTY) LTD - GREASE TRAP MAINTENANCE DIVISION

OdorCure offers a wide range of specialised grease and fat trap services from the supply and installation of new grease traps to services such as,

1. Automated Dosing Systems
2. Scheduled daily, weekly or monthly maintenance programs
3. Once-off deep cleans of grease traps, sewer sumps and septic systems

What does it take to protect your business and the environment too?

1. A fleet of custom built Vacuum Tankers to ensure consistent, timely pumping and cleaning of your waste traps.
2. Our direct supervision and control to ensure proper disposal of waste at every step.
3. A meticulous and comprehensive process for collecting and disposing of waste that complies not only with government regulations but also with environmentally responsible principles.
4. A team of waste management experts, from the operators of our Vacuum Tankers to our legal compliance team who follow our process to the letter.

Most importantly, it takes a company-wide commitment to keeping our environment 100% free of pollution. Everyone who works at OdorCure shares this passion — for the good of you, and for the good of our community. This commitment is your best assurance that your waste is being handled in the most responsible manner.

OdorCure

ODOUR CONTROL SPECIALISTS

ODORCURE (PTY) LTD - WATER AND WASTEWATER DIVISION

OdorCure supplies and installs a wide range of pumps and other related water and wastewater products.

Forced Water Evaporation: Why Mechanical Evaporation?

Enhanced evaporation is considered as an alternative process to a number of wastewater treatment applications such as Reverse Osmosis, Chemical Dosing or Desalination. The evaporation process may be carried out naturally in solar evaporation ponds (which is slow and requires a great deal of area) or by mechanical forced evaporation systems.

Natural solar evaporation is often limited by land availability and the cost of constructing additional storage ponds, not to mention the added cost of clean up and revegetation. **Forced evaporation systems can rapidly increase the evaporation process.** Evaporation systems are relatively compact, reliable and efficient. They can be a low cost addition to enhance evaporation on existing containment ponds or to minimise new pond surface area.

OdorCure Evaporators are now used to manage water in industrial environments, producing water evaporation rates beyond traditional approaches such as misting heads and irrigation systems. In addition our systems are modular and can be tailored to your exact needs or requirements.

Leachate Treatment

For the past four years OdorCure has been involved in the treatment of landfill leachate for several of Ekurhuleni Metropolitan Councils landfill sites. From the installation of pumping equipment and pipelines spanning several kilometers, the design and installation of automated dosing stations to the supply of chemicals.

Once treated the leachate is pumped into Erwat's lines and land up at the waste water treatment works where it is treated further before being discharged back into nature.

Bio-Remediation

In recent years OdorCure has established itself as one of the preferred service providers to clients such as Johannesburg Water for the bio-remediation of contaminated water sources.

Our arsenal of products and systems from MEGA-LAB Manufacturing Ltd. in Canada, puts us in the unique position to treat contaminated water with products specially formulated for the degradation of almost any kind of organic contaminant.

ODORCURE (PTY) LTD - COMMITMENT TO SERVICE NEEDS

Our nationwide network of facilities and affiliated companies ensure superb after sales and on-site service options, answering all your needs quickly, minimising down-time and giving you peace of mind. In the event of an emergency, equipment and skilled staff can be on-site and working within hours. We offer an immediate service on a sale or hire basis. Our objective is to create resources using the skills available both locally and internationally through our affiliations.

The following is an outline of our intention and abilities:

Through our association with our national and international suppliers OdorCure (Pty) Ltd is able to offer these services :

- Our service is regarded as a social responsibility initiative
- In line with our company policy, attention will be paid to environmental and sustainable solutions
- Design, build and install odour control systems from light commercial to heavy industrial
- Supply of more than 90 different odour neutralizing formulations
- Supply and installation of Grease Traps
- Grease trap maintenance programs
- Once-off deep clean of grease traps and waste areas
- Deep cleaning of sewer sumps
- Design, build and install leachate treatment systems
- Offer products, systems and services for the Bio-Remediation of contaminated water sources
- Design, build and install Forced Evaporation Systems
